**Tech Nation,
3 Finsbury Ave,
London EC2M 2PA,
United Kingdom.**

CONFIDENTIAL

Dear Sir/Madam,

For the attention of Tech Nation:

This is in support of the application of Luthfulahi Oseni for the Tech Nation Exceptional Promise Status in the United Kingdom in the field of digital technology.

I am Richard Mokuolu, the CEO and Co-founder of Partsimony. Partsimony is a software platform that enables organizations to build intelligent manufacturing supply chains that are more sustainable and resilient by unifying engineering and supply chain data. Over the last few years, Partsimony has been used by large enterprises and frontier OEMs across automotive, aerospace, robotics, and other segments.

I have known the applicant for almost two years now. Having Luthfulahi join our team has further opened us to opportunities and some untapped areas into which the company can venture. Luthfulahi has a strong excellent spirit and innate curiosity that always shows in every project he has been a part of. Some of them include:

- **Excellence in software development and generating business impact:** When Luthfulahi joined Partsimony, he helped in the launching of Partsimony 2.0, the second version by working on multiple critical features across the Partsimony platform. This increased the company's revenue pipeline by over \$1M+ after launch. Among numerous crucial features, Luthfulahi was instrumental in building the robust and complex collaboration system for the Partsimony platform which enables organizations to collaborate with external partners across multiple product development cycles. Thus, enhancing speed and effectiveness of product development cycles.
- **Strong critical thinking and work ethic:** Luthfulahi takes his personal development very seriously and is always pursuing excellence in his work quality. Luthfulahi possesses strong critical thinking skills with an innate curiosity and thirst for knowledge which drives him to seek new novel ways to address various complex problems. Luthfulahi thrives in complexity and is not intimidated by ambiguity while working under time sensitive tasks. He demonstrates a rigorous work ethic every time he is given a challenging task and always evaluates the logic behind every proposed solution – considering the best practice the team can go for while still moving fast and being a collaborative team player. When a team member is inundated,

Luthfulahi often preemptively picks up their tasks and works on them – thus alleviating team stress and improving the team’s overall effectiveness.

- **Process excellence and enhancing team culture:** Luthfulahi also possesses a keen mindset for process excellence which he leverages to enhance the team’s effectiveness and work culture. Luthfulahi was instrumental in significantly reducing product QA issues by creating QA templates. Luthfulahi developed a template that helped provide pertinent and tailored details which was used to expedite resolution of QA items. In addition, Luthfulahi took the initiative to proactively resolve QA issues. In regard to team culture, Luthfulahi also introduced a “kudos channel” where people that achieved a significant result through commitment and hard work in the company are appreciated. This was created to encourage teamwork within the company and has since meaningfully increased the morale and bond of team members.
- **Community building and mentorship:** One of Luthfulahi’s many strengths is impacting the people around him to help grow their skillsets and technical abilities. At Partsimony, Luthfulahi is always interested in giving back through knowledge sharing seminars and collaborative meetings with his team members. Outside of Partsimony, Luthfulahi enjoys giving back to the community by organizing tech conferences in his local environment and volunteering. Even in his current role, he has volunteered at the Ethereum Conference in Dubai and organized two large developer conferences in Nigeria.

In my years of working with various professionals, Luthfulahi exhibits attributes which very few possess. Luthfulahi is a unique jewel in the engineering field based on my more than ten years of experience in the field. Luthfulahi is extremely beneficial to us and our clients because of his capacity to assess multi-faceted problems – from business process goals to technical solutions to prevailing challenges. Luthfulahi’s demonstrated competencies of developing technologies for scale in a deeply thoughtful manner will be very beneficial in the UK’s digital innovation sector. The skillsets he provides are crucial in building a thriving technological talent base which the overall economy stands to benefit. I am strongly convinced that Luthfulahi will be a valued contributor in any institution.

I am happy to provide more information on the applicant if required.

Thank you.

Best regards,
